

Arcus

ARCUS

The new, low cost, attractive OHP

Arcus folded

Front panel

Cable compartment

Rotating head (360°)

The OHP can still be attractive. In spite of many modern presentation devices on the market it is a still very powerful tool. The Arcus OHP range continues the highly successful VEGA OHP tradition. Arcus is designed for those demanding the highest quality presentation aid, but have a limited budget. Different models (250W and 400W) will satisfy diverse educational and business applications. Arcus features foldable arm, special silent cooling system, cable compartment and carefully chosen optical elements. A specially designed rotating head (360°) enables all-round projection. All models are equipped with two lamps with a fast lamp-changer. The integrated colour correction system (fringing) enables a better range of picture sizes and distances.

Arcus is equipped with unique Vega optical elements, designed and manufactured by Vega, which is one of the key strengths of Vega's products. Many years of experience has led to the achievement of perfect quality as regards optics - this being confirmed by references from our partners and customers throughout the world.
